

Client-Side Technologies Lab 5 (JavaScript Fundamentals)

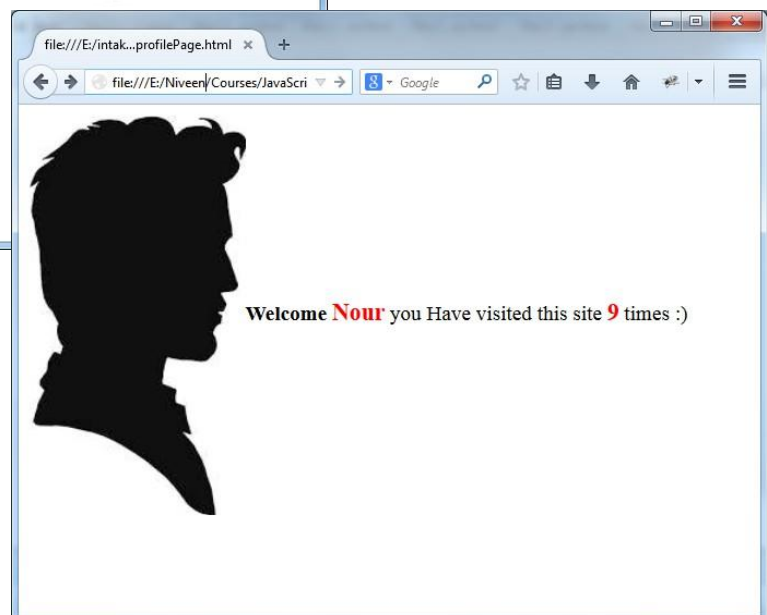

1.1. Cookies

Make your own .js library to create, display and delete cookies, then use it in creating the required cookies to display a greeting message to your visitor with displaying an image as his profile pic referring to his gender, and inform him with his number of visits to the site. Display user name and number of visits with font color according to his choices.

A screenshot of a web browser window displaying a registration form. The browser's address bar shows the file path: file:///E:/intake.../registered.html. The form contains the following elements:

- A text input field labeled "Enter your name:".
- A text input field labeled "Enter your age :".
- A label "Select your Gender:" followed by two radio buttons. The first radio button is selected and is accompanied by a silhouette of a man's head. The second radio button is accompanied by a silhouette of a woman's head with a ponytail.
- A dropdown menu labeled "Select your favorite color:" with "Red" selected.
- A "register" button at the bottom.

2. Event Object

- 2.1. Alert ASCII Code of any key pressed; detect whether it is alt key or ctrl key or shift key**
- 2.2. Prevent menu displayed when mouse right click button is clicked by preventing from mouse right click from its action.**
